Bifrost PRIORITY TRACK

Problem statements

Choose any one problem statement — 3 winners in this track

Winning teams get a direct interview with Bifrost

01 Build a coding agent that gets the job done on the fewest tokens

Build a coding agent (CLI, IDE extension, or server) that completes real coding tasks correctly while using as few tokens as possible.

02 Build a benchmarking platform for AI agents, not just models

Pick one kind of agent (coding, support, research, or another) and build a platform that runs any agent of that kind, whatever it's built with, through the same tasks and shows how it really performs.

03 Build an agent that pentests a target on its own

Build an agent that runs an authorized penetration test with no human at the keyboard. Security · sandbox only.

04 A feature the open-source gateway is missing

Extend the open-source Bifrost gateway with something its operators would miss if you took it away: a plugin, an integration, a UI, a routing or caching strategy, or a developer tool.
